

Administrative Information Management System (AIMS) **AIMS Project Report – February 15, 2019**

Progress continues on the first development sprint and the team now has access and training on the system used to log, test and manage user stories.

User stories profile desired functionality from the perspective of individual users. As such, there can be a significant number of stories to inform the development of the final software solution. The total number of user stories for the first sprint for each functional area include:

Finance:	100 user stories
Supply Chain:	180 user stories
Human Resources:	260 user stories
Workforce Management:	109 user stories

The hundreds of stories included provides insight into the detail addressed within each sprint.
