

Administrative Information Management System (AIMS)

Systems in Transition: Finance

The Administrative Information Management System (AIMS) is an initiative that will see many business systems common to healthcare retired. Among these are Finance systems, a select sample of which includes:

- Oracle e-business Suite - for processing financial transactions in Saskatoon
- Kofax Markview - the invoice processing component of the Oracle e-business suite for Saskatoon
- Cognos Analytics - a business intelligence tool used for financial reporting and data analysis in Regina
- SmartStream - a business transaction software for processing accounts payable in Regina
- ACCPAC - accounting software used at some Regina locations for accounts receivables

These are a few of the many Finance systems that will be retiring across the province. Upon the implementation of AIMS there will be a single destination for all the tools provided by these systems, with Finance staff only needing to log into one system.
